

Release Readiness Checklist

Scope and Planning

- Release scope has been confirmed with product and development.
- All critical user journeys for this release have been identified.
- High-risk areas have been prioritized.
- Known limitations and out-of-scope items have been documented.
- Open questions and unclear requirements have been clarified.

Build and Environment

- Latest iOS and Android builds are available for testing.
- QA/UAT environment is stable.
- Required test users and test data are available.
- Backend services are reachable.
- Logs or backend responses are available where needed for investigation.

Functional Readiness

- Critical flows have been tested on both iOS and Android.
- Positive and negative scenarios have been covered.
- Boundary cases and failed states have been checked.
- Repeated actions and duplicate attempts have been tested where relevant.
- Data shown to the user is accurate and consistent.
- Error messages are clear enough for the user to understand what happened.

Mobile Readiness

- App behavior has been checked on iOS and Android.
- App backgrounding and foregrounding have been tested.
- Session expiry behavior has been tested.
- Slow network and delayed response behavior have been tested.
- Recovery after failed or interrupted flows has been tested.
- App does not crash during key user journeys.

Security and Compliance Readiness

- User access and session behavior have been checked.
- Sensitive data is not exposed in the UI, logs, or error messages.
- Audit/logging behavior has been checked where possible.
- Any regulatory-impacting risk has been communicated before release.

Defect and Risk Status

- No open severity 1 defects remain.
- No open severity 2 defects remain unless explicitly accepted by business/product.
- All critical defects have been retested after fixes.
- Impacted areas have been checked after fixes.
- Known risks have been documented and shared.
- Business/product has accepted any remaining risk.

Regression and Sign-off

- Focused regression has been completed based on sprint changes and defect impact.
- High-risk areas have been retested.
- Repeated or recently fixed issues have been rechecked.
- QA summary has been shared with stakeholders.
- The final go/no-go decision has been made based on test results and accepted risk.
